SKILLS

Languages: Python, JavaScript, TypeScript, C, SQL

Frameworks: React, Node.js, Express, Django

Data & ML: Pandas, NumPy, Scikit-learn, ETL pipelines, data processing, feature engineering

Tools: Git/GitHub, Docker (basic), Jest, REST APIs, technical documentation

Concepts: Software development lifecycle, problem solving, analytical thinking, experimentation, prototyping

Strengths: Quick learner, collaboration, communication, feedback-driven improvement

PROJECTS

HoopPredict - Python, Django, React, Scikit-learn

November 2025

- Built a full-stack analytics platform integrating machine learning models with a React frontend and Django backend
- Developed end-to-end ETL pipelines combining API data and web scraping for automated data processing and analysis
- Engineered 40+ features including team performance metrics, injury impact scores, and matchup statistics
- Trained and evaluated a Random Forest model to generate structured predictive outputs and support analytical decision-making
- Designed REST APIs to serve predictions and structured data to the frontend

P2P File-Sharing Application - React, TypeScript, Node.js, Express, SQL

October 2025

- Designed and developed a full-stack application enabling secure peer-to-peer file transfers using WebRTC
- Implemented AES-256-GCM encryption, JWT authentication, and bcrypt hashing for secure user authentication and data transfer
- Built backend services in Node.js and Express to handle authentication, signaling, and file coordination across a full-stack system
- Achieved 18–20 MB/s throughput with P95 latency under 200ms for 1GB file transfers
- Developed a comprehensive test suite with 90%+ coverage using Jest, strengthening software quality and reliability

Job Application Tracker Extension - JavaScript, Chrome APIs

January 2026

- Developed a Chrome extension to digitize and automate tracking of job applications across multiple platforms
- Implemented DOM parsing to extract structured job data dynamically from web pages
- Designed client-side storage using Chrome Storage APIs to persist application data efficiently
- Built message-passing architecture between content scripts and background scripts for seamless data handling
- Improved workflow efficiency by reducing manual tracking effort and organizing data more effectively

WORK EXPERIENCE

City of Coquitlam

October 2023 – Present

Aquatic Leader (Lifeguard + Swim Instructor)

Coquitlam, BC

- Communicated effectively with diverse groups in a fast-paced environment while maintaining professionalism
- Managed multiple priorities with strong organization, accountability, and attention to detail
- Documented incidents clearly and worked collaboratively with team members to support safe operations

EDUCATION & CERTIFICATIONS

Simon Fraser University

September 2023 - June 2028

BS Computing Science

Burnaby, British Columbia

CompTIA Security+

June 2026

CompTIA Network+

May 2026
