[GitHub](#) [LinkedIn](#)

Computing Science student at Simon Fraser University with strong foundations in Python, C, and C++, hands-on experience with Linux systems, Git version control, and networking fundamentals (TCP/IP, UDP, packet-level protocol analysis). Experience building distributed, containerized systems with Docker and Kubernetes, REST APIs, and machine learning pipelines in Python.

SKILLS

Programming Languages: Python, C, C++, C#, JavaScript, TypeScript, SQL

Systems & Networking: Linux, TCP/IP, UDP, HTTP, Socket Programming, Packet-Level Protocol Analysis

Distributed Systems & Infrastructure: Docker, Kubernetes, REST APIs, Git

Data & Machine Learning: Pandas, NumPy, Scikit-learn (Random Forest, Isolation Forest), Feature Engineering

Tools: Wireshark, GDB

PROJECTS

AI Assisted Network Intrusion Detection System | C#/.NET, Docker, Kubernetes, Python July 2026

- Architected a distributed system split into two containerized services communicating over a REST API, deployed with Docker and Kubernetes (DaemonSet and Deployment manifests) to separate privileged network access from credentialed components.
- Built a real-time packet-capture and flow-analysis pipeline processing live TCP/UDP network traffic into telemetry features, and trained an Isolation Forest anomaly-detection model in Python to flag anomalous behavior.
- Integrated a third-party LLM API to automate event classification and reporting, reducing manual triage effort.

Network Packet Sniffer | C, Linux November 2025

- Developed a packet-sniffing tool in C on Linux by parsing Ethernet and IP headers to extract protocol and addressing information.
- Used Linux networking libraries and debugging tools to validate captured traffic behaviour.
- Logged capture traffic to support repeatable validation, troubleshooting, and reporting.

NBA Game Prediction System | Python, Django, Pandas, Scikit-Learn October 2025

- Engineered a 49-feature dataset per matchup using Python and Pandas from a custom web-scraping pipeline, structuring raw data for machine learning through systematic feature design.
- Trained a Random Forest classifier in Python (Scikit-learn) on the engineered features, achieving 64% accuracy on a held-out test set.
- Solely built the backend for this 24-hour hackathon project (team of 3), collaborating under time pressure to deliver a working system end to end.

WORK EXPERIENCE

Lifeguard October 2023 – Present

City of Coquitlam Coquitlam, BC

- Coordinated with 2-5 lifeguards per shift to maintain continuous safety coverage for facilities serving up to 250 patrons.
- Assessed and responded to time-sensitive situations under pressure, following established protocol with strong attention to detail.
- Documented incidents accurately and communicated clearly with staff and the public in high-attendance, fast-paced environments.

EDUCATION & CERTIFICATIONS

Simon Fraser University Expected Graduation: 2028

BS Computing Science Burnaby, British Columbia

CompTIA Security+ September 2026

CompTIA Network+ June 2026
